Letter of Recommendation

To Whom It May Concern,

I, Zoltan Csongradi as Senior Software Engineering Manager at GE Healthcare, had the pleasure of employing Zsombor Czaban as a Software Engineer Intern for 14 months. During his internship, Zsombor consistently demonstrated exceptional motivation, commitment, and delivered tangible, high-quality outcomes.

From the outset, Zsombor ramped up quickly, showcasing both technical proficiency and autonomy. His first assignment involved familiarizing himself with the Microfocus Application Lifecycle Management (ALM) tool and understanding our medical device product requirement management methodology. He then explored the ALM tool's REST API and successfully enhanced a custom Java-based engineering tool to support mass updates. His contributions significantly reduced repetitive tasks, saving several hours per program.

Following this successful solo project, Zsombor was selected to join a team developing a Customer Onboarding Tool aimed at transforming our customer service operations. He quickly grasped both the technical and business contexts and delivered features using Go and TypeScript across the backend and frontend. Beyond feature development, he actively contributed to unit, functional, contract, and end-to-end testing.

I greatly appreciated Zsombor's agility, can-do attitude, and motivation. Despite being the most junior member of the team, he listened with an open mind, brought creative ideas to the table, and inspired his peers. His collaborative spirit and technical contributions made a lasting impact.

Had Zsombor not chosen to pursue an MSc abroad, I would have gladly offered him a full-time position. I wholeheartedly recommend him for any future opportunity.

Sincerely,
Zoltan Csongradi
Senior Software Engineering Manager
GE Healthcare
